

Create an App that has 4 Activities

1. Login: With 2 EditText (username and password) and 2 buttons (login and add user).

If the login is pressed the username and password are checked, if they are ok it checks the category, if it is an Admin, it goes to the UserList, if not to the UserDetail

If the AddUser is pressed it goes to the AddUser Activity

2. AddUser: it has 3 editTexts (name, username, password) and a spinner with the options (Admin, Employee and Client)

If the back button is pressed it saves the information in an Array in the Singleton.

3. UserDetail: an activity with an imageView (with one image for the client and another for the employee) and a textView with the name.

4. UserList: and activity with a RecyclerView with all the users

Worth: 20% of the grade

Can be done in groups of 2/3

Deadline: 05/03/2023
